Assignment 8:
Packet Hiding

08.12.2015

1 Packet Hiding (submitted)

In this assignment your rootkit should hide packets. Your kernel module should accept an IP address as input when loading. Any TCP or UDP communication with this IP address (to and from) should be hidden from any process using `libpcap` to sniff packets (e. g., `tcpdump`, `wireshark`).

Submission

Generally, put *all* files you want to submit into *one* `.tar.gz` file and submit it on `praksrv.sec.in.tum.de` using the `submit` script. Put all files from one assignment into *one* file!
